Enterprise platform architect driving multimillion dollar efficiency at scale.

WORK EXPERIENCE

General Motors Jan. 2014 – present

Staff Software Engineer (Lead), High-Performance Compute (HPC) Innovation [2019 – today]

- **Delivered $12M+ in annual cost reductions** by architecting and building an HPC Toolkit on Slack and Microsoft Teams via Azure Bot Service, providing real time job telemetry and proactive failure detection *to 2,000+ CAE engineers* and materially reducing wasted compute and engineer time.
- **Delivered $650K+ in annual cost savings by implementing a Slack based triage and routing system** for HPC support, reducing resolution time and giving leadership real time visibility into ticket volume and systemic bottlenecks.
- **Reduced new Teams bot delivery time from four months to two weeks by designing a reusable Azure Bot Service architecture**, enabling standardized and scalable enterprise rollout.
- **Removed weeks of infrastructure setup per team by establishing a shared Neo4j evaluation platform** and internal Slack community, accelerating graph-based reasoning and AI experimentation.
- **Saved 100+ developer days annually by automating builds**, security scans, and deployments across web, desktop, and CLI applications, including introducing automated Fortify scanning for C++.
- **Improved CI build performance by 70%+ by implementing Kubernetes persistent volume caching** for Maven artifacts, eliminating redundant dependency resolution in containerized pipelines.
- **Prevented hundreds of failed security scans by leading the migration from Jenkins Enterprise to Jenkins OSS** for containerized builds in Kubernetes, strengthening code quality gates and pipeline reliability.
- **Reduced Jenkins job sprawl from 72 jobs to 4 standardized pipelines**, consolidating build logic into version controlled workflows and lowering operational overhead.
- **Enabled 12+ major production releases annually by leading deployment execution** in a high-stakes vehicle design software environment with complex distributed dependencies.
- **Consolidated legacy launchers into a unified modern platform by developing a JavaFX GUI for EnginFrame NICE**, improving application management and end user experience.
- **Saved 100+ hours annually by mentoring interns and early career engineers to deliver a Python based Sonar API reporting tool** that automated scan aggregation and improved code health visibility.

Software Engineer, Computer Aided Engineering (CAE) [2016 – 2019]

- **Prevented hundreds of failed HPC jobs** by re-architecting a *Java* CLI app for HPC job submissions, ahead of schedule.
- **Reduced HPC Tools app *Java* code by 3K lines while remediating security vulnerabilities**, completing remediation in one month instead of six as planned.
- **Enhanced user workflow by integrating new functionality into a Classic ASP web app on IIS** during an infrastructure migration project - a strategic addition beyond the original scope, while maintaining security compliance.
- **Saved 5+ hours of run time per job for Maxwell electric applications** and resolved hung jobs by working with vendors to upgrade integration code.

Software Engineer, Customer Care and Aftersales [2015 – 2016]

- **Reduced organizational costs by $200K+ annually** by removing the need for several external contractors to develop an *IBM DataStage* Extract-Transform-Load (ETL) framework.
- **Consolidated 12 disparate databases into one** during a migration from *IBM DB2* to *Oracle DB*.

Enterprise platform architect driving multimillion dollar efficiency at scale.

Software Engineer, Manufacturing Engineering IT [2014 – 2015]

- **Led UI development for a web app in AngularJS and Spring MVC, used across 100+ global assembly plant floors** to streamline ergonomics and CBA, enhancing operational workflows.
- **Efficiently archived 40K+ files with HP QTP,** retiring a manufacturing app without business disruption.

EDUCATION

Texas State University
Master's in Computer Science, 3.92 GPA — Dec. 2021
Certificate in Computer Science, 3.86 GPA — Dec. 2019

Indiana University
Bachelor of Science in Public Affairs, 3.94 GPA, with highest distinction — May 2013

Certifications: Microsoft Azure Fundamentals, Microsoft Azure Developer Associate, Microsoft Azure DevOps Engineer Expert, Certified SAFe 5 Practitioner, Certified Jenkins Engineer, CodePath Intermediate Software Engineering

PROJECTS

- **Developed an AI for checkers in C++**, implementing Minimax and Alpha-Beta Pruning algorithms.
- **Led Verilog development in a 5-stage pipelined CPU** co-simulation project, incorporating Python MyHDL.
- **Built a Lambda expression parser in Java Compiler Compiler (JavaCC)** to evaluate lambda calculus expressions.
- **Implemented secure password techniques**, focusing on hashing and salting with PBKDF2 for learning purposes.
- **Designed ctl.borislavsabotinov.com, a web app for evaluating Computational Tree Logic expressions**, using Firebase Datastore for robust NoSQL data management and JavaCC for syntax evaluation and expression processing.

TECHNICAL SKILLS

Languages: Java, SQL, JavaScript, Bash, C
Platforms: Kubernetes, OpenShift, Azure, Azure Bot Service, Databricks, GitHub Actions, Jenkins, Google Cloud Run
Data: PostgreSQL, Oracle, IBM DB2, Neo4j, Firebase Realtime Database, Firestore
Architecture & Infrastructure: Spring Boot, Terraform, Helm, Apache Maven, CI/CD, Event-driven services, RAG pipelines

MILITARY SERVICE

31B Military Police, United States Army (Secret Security Clearance) — Aug. 2008 – Aug. 2016

- **Awarded the Army Commendation for exemplary service in Afghanistan** (Operations Enduring Freedom and New Dawn), recognizing outstanding performance and dedication under challenging conditions.
- **Enhanced counterinsurgency efforts and intelligence operations in a Forward Tactical Operations Center**, demonstrating strategic leadership and operational effectiveness in critical support roles.
